In a study based on a population-based sample of 2383 middle-aged and older adults, researchers found that higher cardiorespiratory fitness and physical activity both independently, and combined, were associated with a higher likelihood of normal blood glucose, and less likelihood of diabetes. Cardiorespiratory fitness is the ability of the heart and lungs to use oxygen effectively and circulate blood throughout the body. Physical activity is the total energy spent by a person during their everyday activities. "Cardiorespiratory fitness and physical activity each independently and their combined influence on the risk of abnormal glucose metabolism also differed based on the specific type of physical activity that is performed," said John C. Peters, MD, PhD, and lead study author, who is a research fellow at the Harvard School of Public Health in Boston. However, there was no evidence that

these factors differ in their influence on the risk of diabetes based on obesity or physical activity levels. "Our findings add to the evidence that, in older adults, higher cardiorespiratory fitness is associated with a lower risk of diabetes and further suggest that increasing physical activity alone or physical activity combined with cardiorespiratory fitness may lead to reductions in diabetes, even among adults with normal body mass index," said Dr. Peters. In the observational study, researchers analyzed data on the physical, cardiorespiratory, and dietary characteristics of participants who took part in a

KO Approach is a new type of file browser, which is very different from your conventional approach that uses the context menu. After you run KO Approach, Windows Explorer will show a much more convenient menu for file navigation. If you have several folders, KO Approach will show a hierarchial list, which you can get into easily by simply holding down the mouse. As a file browser, KO Approach's special ability is that it supports file preview. Just click on a file and hold down the mouse to get KO Approach's preview interface. You can also switch back to file browser simply by releasing the mouse button. KO Approach is a free extension for Windows. It will not add any extra bytes to your system and does not need to be open all the time. Approach developer notes: KO Approach is not a file manager. Instead it is designed to provide quick access to your files in Windows Explorer. KO Approach is derived from the concept of using the mouse key on Windows (instead of CTRL). This concept was developed by Stefan Grobe at Microsoft Labs. When you are

working in a large group of folders, KO Approach is designed to help you navigate among them. If you work in a smaller group of folders, you can still use the context menu. Additional features of KO Approach: * Provides a preview interface for sound files * Supports the EasyTag file tagger * Supports InstantWave to display wav files * Supports a variety of file types * Functions as a proxy * Works in Windows Explorer * Works in Windows 2000, Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10 and Windows Server 2012 Extras Please note that KO Approach is a free extension and does not contain any malicious code. Installation Simply download KO Approach from the download link. When the file is downloaded, double-click on KO Approach.exe to run the file. Click on Yes to agree to the terms of the license agreement, then follow the install instructions. It is assumed that you have a current license (if not, you will need to purchase a license) because it is unnecessary to install an obsolete version. Basic setup: KO Approach can be used on any Windows computer. When KO Approach is installed, it puts itself in the system tray (the little icon in the system tray is green). The Green icon will appear in the system tray every time you start Windows Explorer. Advanced setup: Open
